Jean Piaget Richard Kohler 2014-10-22 Jean Piaget Richard Kohler is one of the great thinkers of the twentieth century. His influence on developmental psychology, education and philosophy is unparalleled. As a key figure in the development of constructivism, he was one of the first to argue that human knowledge is constructed by the individual. His work is characterised by his focus on the relationship between the mind and the environment, and his emphasis on the active role of the learner. His theories have had a profound impact on the development of education, and his work continues to be influential today.

In his seminal work, *The Inheritance*, Piaget made a significant contribution to the understanding of human development. He argued that development is a process of active construction, rather than a passive absorption of information. His theories of cognitive development were based on the idea that children construct their understanding of the world through a series of stages, each of which is characterized by a different way of thinking. Piaget's theories have been influential in the development of educational practices, particularly in the areas of early childhood education and special education.

Examines outcomes of various types of risk in relation to culture and context.

Too Purpley!—Jean Reidy 2013-06-27 Too purpley, too tickly, too puckery, too prickly! What's a toddler to do with a closet full of clothes and nothing to wear? Try on everything, of course! Playful rhyming text and textile-driven art leap off the page in this board book edition, tailor-made for little hands.

Paulo Freire-Daniel Schugurensky 2014-10-23 Paulo Freire is one of the most influential thinkers in education. This text is a thoughtful and thorough introduction to Freire's work, situating it in the context of his life, intellectual journey and the reception of his thinking around the world. Daniel Schugurensky's text offers a coherent and accessible account of Freire's educational thought, looking at its contribution to educational theory and practice and exploring the legacy of Freire for contemporary education and the relevance of his thought for today's students.

Memory and Intelligence—Psychology Revivals—Jean Piaget 2015-04-10 In the course of their researches for Mental Imagery in the Child (1971), the authors came to appreciate that action may be more conducive to the formation and conservation of images than is mere perception. This raised the problem of memory and its relation to intelligence, which they examine in this title, originally published in English in 1973. Through the analysis primarily of the child's capacity for remembering additive and multiplicative logical structures, and his remembrance of causal and spatial structures, the authors investigate whether memories pursue their own course, regardless of the intelligence or whether, in specified conditions, mnemonic improvements may be due to progress in intelligence. They examine the relationship between the memory's figurative aspects (from perceptive recognition to the memory-image) and its operational aspects (the schema of the intelligence), and stress the fundamental significance of the mnemonic level known as the 'reconstruction memory'. This was a pioneering work at the time, presenting illuminating conclusions drawn from extensive research, together with a number of constructive ideas which opened up a fresh approach to an important area of educational psychology.

Social Sustainability—Past and Future—Sander van der Leeuw 2013-12-31 A novel, integrated approach to understanding long-term human history, viewing it as the long-term evolution of human information-processing. This title is also available as Open Access.

Confluentes—Chaobne Tao 2014-10-23 Chaobne Tao's text offers a coherent account of Confucian educational thought and its implications for the modern world. Arguing that Confucianism is more than an ancient master who emphasized tradition, role-learning and teacher-centredness, Tao portrays Confucius as a progressive educator who challenged the social norms of his time and transformed the nature of teaching and learning in China and beyond. Through a textual study of the Analects, this text provides a critical exposition of Confucius' work, particularly with respect to his interpretations of human beings' mission in life, potentials, relationships with one another, and educational process. Further highlighting the contemporary relevance of Confucius' work, the author offers a Confucian framework for 21st century education - one that harmonizes modern knowledge and skills with universal values on shared humanity and loving others.
